

Gmail Sent Mail Extractor (Python + Gmail API)

This project uses Python and the Gmail API to extract sent email metadata (recipient, subject, date) within a specific time range and export it into a structured CSV file.

The goal of this project was to automate manual work during job hunting by converting unstructured inbox data into analysis-ready datasets.

Features:

- Secure Gmail authentication using OAuth 2.0
- Fetch sent emails within a custom date range
 - Extract:
 - Recipient email IDs
 - Email subject lines
 - Sent dates
 - Export results into CSV format
 - Simple and reusable Python script

Tech Stack:

- Python
- Google Gmail API
- OAuth 2.0 Authentication

Setup Instructions:

Note: You can follow this link: <https://youtu.be/1Ua0Eplg75M?si=sys9cLdQfyh83DY>
Make sure while configuring Configure OAuth Consent Screen you choose external, also add your gmail under **Test Users** and select **Desktop App** while selecting application type

1. Create Google Cloud Project
 - Go to: <https://console.cloud.google.com/>
 - Click: Select Project → New Project
 - Give any project name
 - Create project
2. **Enable Gmail API:**
 - Navigate to: APIs & Services → Library
 - Search for: Gmail API
 - Click: Enable
3. **Configure OAuth Consent Screen**
 - Go to: APIs & Services → OAuth consent screen

- Choose: External
- Fill required fields (App name, email)
- Add your Gmail under: Test Users

4. Create OAuth Credentials

- Go to: APIs & Services → Credentials
- Click: Create Credentials → OAuth Client ID
- Application type: Desktop App
- Download the generated JSON file.
- Rename it: credentials.json
- Place it in the same directory as your Python script.
- Install Required Packages: `pip install google-api-python-client google-auth-http2 google-auth-oauthlib`
